

The most beautiful way to navigate your day.

Veterinary cloud practice management software.

Deeply intuitive design structures your day and your workflow. As the sea turtle is nature's best navigator, NaVetor always helps you find your way.

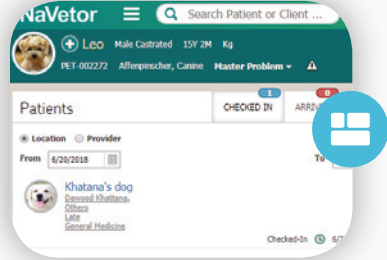

Beautiful inside and out.

Just as nature finds a way to simplify complex systems, NaVetor makes your workday and workflow beautifully easy. With a complete balance of design and intelligence, NaVetor is the modern, efficient, beautifully easy veterinary software designed to help you navigate the business of your veterinary practice. Because it's cloud-based, you can use it anywhere without the need for installation or new hardware investments. Plus, there's no need for regular backups because your data is stored securely in the cloud. **Innovation. It's a beautiful thing, isn't it?**

Natural workflow. It starts here.

NaVetor contains all the capabilities you would expect in a full-featured software. Created specifically for veterinarians, it follows your workflow and streamlines your workday.

Quick-View Dashboard

Important information is consolidated into a single view. Create different dashboards and views for all the roles in your practice. See upcoming appointments, checked-in patients, announcements and notifications. Check patients in when they arrive. And view important key performance indicators that measure the health of your practice.

Appointment Calendars

Staff can view appointments by day, week or month for single or multiple providers. Intuitive workflow to schedule and reschedule appointments, block calendar and check in patients. Customize views to color code appointments by type and status.

Whiteboard

Our unique Whiteboard gives you a snapshot view of everything happening within your veterinary practice. Shows status, location and appointment details of all checked in patients. Contains a client-friendly view that can be projected into your waiting room or on your website, where clients can see the status of their pets.

Electronic Medical Records

Create and maintain paperless medical records for each patient, so you can make better decisions, manage treatment plans and capture charges electronically. Track patient visits, SOAP records, treatments and client communication via phone/email/text – all in one place. Create templates for treatments you prescribe often to speed up your workflow. Treatment plans are tied to invoicing, inventory and data analytics for a full picture of your business and financial health.

Thoughtful, intuitive design brings balance to your day.

Every detail has been thought through to maximize efficiency and minimize steps. NaVetor creates simplicity out of the complex.

Billing and Financial Management

Streamline administrative processes and easily manage the business side of practicing veterinary medicine. Capture charges in the electronic medical record as services are performed within the treatment plan and automatically include them in the client invoice. Easily create estimates for recommended procedures, with expiration dates automatically set. Capture pet owner signatures electronically.

Inventory

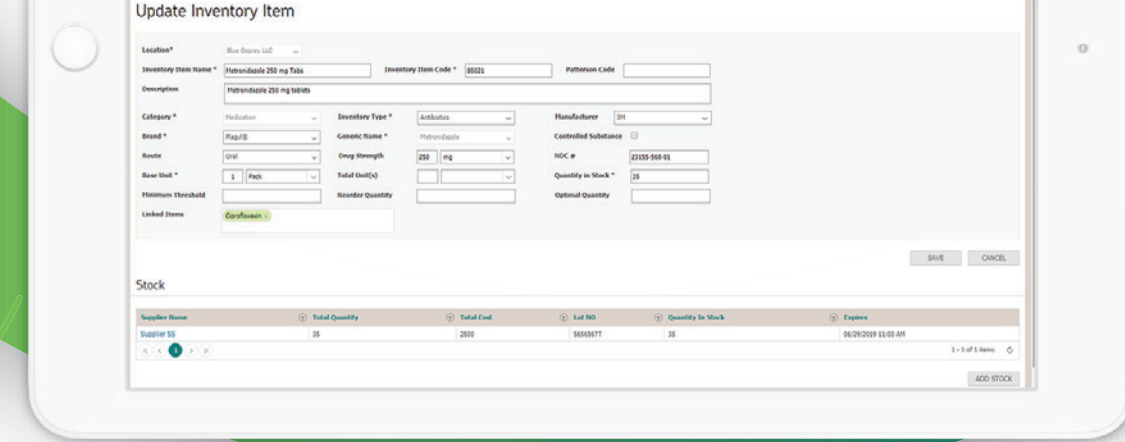

Automate your inventory management and take guesswork out of ordering and reordering. NaVetor's intuitive, streamlined approach allows you to quickly and easily add or update the products you keep on hand.

Reporting

Manage your business and identify areas to grow through NaVetor's reporting feature. Use any of NaVetor's templated reports or create your own custom reports and save them so they can be quickly pulled in the future.

Conversion and Training

Data transfer is the biggest barrier to adopting new technology. That's why we made this easy, too. First, we assign you a dedicated Customer Success Manager who will be your main point of contact for data conversion and training. Once complete, you'll have a dedicated Support Specialist for three months, plus 24/7 help via chat, phone or email. It's never been easier to migrate to better software.
